Raymond Goldberg is the Dean of Health Sciences at Vance-Granville Community College in North Carolina. Over the course of his career, Ray has taught a variety of drug-related courses, authored numerous articles on health- and drug-related topics and received several significant research grants for his work in health and drug education.

This book did more than talk about drugs. The author translated cold data and explained why someone would want to take this drug. He described a street view (and some photos) of the drug (color, how taken, amount people buy, various street names) and gave information on what the real effects and long term effects were on an individual. I found myself really getting carried away reading out of interest, not just the assigned amount. However, I think at times the book was a bit

odd. For example, the chapter on LSD (ch 13 Hallucinogens) described why so many artists particularly like the drug and even the military uses for it. It talks of studies but doesn't do a lot of citing these studies. So as a basic information it is fantastic. For a textbook to save for future research, this isn't one of them. (I believe the publisher has created quizzes to save the teacher some work, these answer keys are faulty. Hope the next edition fixes this issue). Overall, thumbs up for a 100 or 200 level course.Â Drugs Across the Spectrum

I rented this for my Problems of Substance Abuse class. I really wish I'd opted to buy it when the rental period was up, because I often want to refer back to it.

Book was in good shape, and as described. Thank you!!:).

I bought this as a textbook for a class I was taking on drugs in modern society. This book does an excellent job of explaining aspects of addiction, drug use, drug trafficking, and pretty much everything you can think of relating to drugs. This book made more sense than the professor did, and I have used it numerous times as a resource for other classes. I will certainly keep it and use it as a reference later on in my career.

Although the College requires this book for Health 210 (Substance Abuse); it was not worth the price; No offense to the authors. However, this book is full of opinions and statistics that make you wonder if these are real stats or just thoughts, numbers and ideas stemming from someone who has never been exposed to drugs, and the impact it can have on society. I got more from the professor's powerpoint presentations than this book..

Good I'm just a little confused on how and when to return it.

Great text for my addictive behavior class. Psychology Major WilmU spring 15"

Thanks! Was as described
