Vaccine Epidemic: How Corporate Greed, Biased Science, And Coercive Government Threaten Our Human Rights, Our Health, And Our Children

Synopsis

Public health officials state that vaccines are safe and effective, but the truth is far more complicated. Vaccination is a serious medical intervention that always carries the potential to injure and cause death as well as to prevent disease. Coercive vaccination policies deprive people of free and informed consentâ”the hallmark of ethical medicine. Americans are increasingly concerned about vaccine safety and the right to make individual, informed choices together with their healthcare practitioners. Vaccine Epidemic focuses on the searing debate surrounding individual and parental vaccination choice in the United States. Habakus, Holland, and Rosenberg edit and introduce a diverse array of interrelated topics concerning the explosive vaccine controversy, including the ethics of vaccination mandates, corrupting conflicts of interest in the national vaccine program, and personal narratives of parents, children, and soldiers who have suffered vaccine injury. Newly updated with additional chapters focusing on institutional scientific misconduct, mandates for healthcare workers, concerns about HPV vaccine development, and the story behind the Supreme Courtâ”™s recent vaccine decision, Vaccine Epidemic remains the essential handbook for the vaccination choice movement and required reading for all people contemplating vaccination for themselves and their children.

Customer Reviews

Organized somewhat radically around a grim Ursula K. Le Guin short story about a child tortured for the good of a community, this book's three sections provide anecdotal accounts of physical disabilities following vaccination, discrimination faced by physicians who challenge the status quo,

and the legal and ethical issues raised by vaccination. Holland, Habakus, and their contributors address the onset of autism in early childhood; Gulf War syndrome, now thought to be connected to the anthrax vaccinations; an adult's muscle deterioration thought to have been caused by a flu vaccination; a teenager permanently invalidated after receiving a HPV vaccination; the role of the medical industry in shaping media coverage; constitutional issues about the government's right to mandate health care; and many other related issues. There are 23 contributions in all, and supporting documents and an appendix prepared by the Center for Personal Rights, a non-partisan advocacy group focused on vaccination choice with which Holland and Habakus are associated (though a disclaimer absolves the Center from the views expressed within). Though the editors come to the issue with an obvious agenda, their effort should still prove useful to anyone suspicious of present policies. (c) Copyright PWxyz, LLC. • There are unanswered questions about vaccine safety. . . . No one should be threatened by the pursuit of this knowledge. • (Bernadine Healy, MD, former director, NIH) • This book raises some of the important issues that need to be discussed. • (Dave Weldon, MD, practicing physician and former U.S. Congressman)

This book is amazing. It has so much great information on vaccines. You can learn about the ingredients in vaccines and all the different side effects associated with those ingredients. Not only does it give you every side of the story but it uses information gathered from doctors, scientists, and journalist to show that vaccines are dangerous. I think everyone should read this book to educate themselves about something as serious as vaccines. This book was so good that I used it to write my research paper in college.

the best knowledge

informative

Amazing book. Full of information. Everyone should have a copy.

If you want to learn the truth about vaccines, this book is clear, responsible and thorough about the facts. And the facts about vaccines should be known by anyone who is going to have their child

vaccinated.

Factually and powerful. Good insight on medical studies and how they work and don't

Every parent should read this book!

This book contains excerpts from lawyers, doctors, parents of vaccine damaged children, parents of vaccine-killed children, a vaccine injured child who has achieved significant recovery, financial analysts, someone injured from the flu vaccine who received compensation from the NVIC, and much more. It is essential reading if you really want to be fully informed about the vaccine debate. This is not about a fringe group of people making outrageous claims. These are real people with real stories of tragedy, pain and sorrow who want to help others avoid the same mistakes they made. This is also a wake-up call to all those involved in the medical profession to actually devote some time to research this issue. Don't just parrot what you have always believed or what you were taught by pharmaceutical industry funded education. This is also a call to those working in the pharmaceutical industry to get the real facts. Do not continue to derive benefit through the pain, suffering and sometimes death of innocent children. Educate yourself. Find out what is happening. Children today are not more healthy as a result of receiving more vaccines than any other generation in our history. In fact the US infant mortality rate has plummeted and the health index of US children is probably at its lowest point. Chronic asthma, allergy, diabetes and developmental issues are far too commonplace. Yes there are multiple factors involved in each of these, but that should not stop every thinking parent and every thinking person involved in working for a pharmaceutical company from asking themselves some hard questions - and as a minimum - read the product information sheets for every single shot you think you should accept.
