Narrowband Direction Of Arrival Estimation For Antenna Arrays (Synthesis Lectures On Antennas)

Synopsis

This book provides an introduction to narrowband array signal processing, classical and subspace-based direction of arrival (DOA) estimation with an extensive discussion on adaptive direction of arrival algorithms. The book begins with a presentation of the basic theory, equations, and data models of narrowband arrays. It then discusses basic beamforming methods and describes how they relate to DOA estimation. Several of the most common classical and subspace-based direction of arrival methods are discussed. The book concludes with an introduction to subspace tracking and shows how subspace tracking algorithms can be used to form an adaptive DOA estimator. Simulation software and additional bibliography are given at the end of the book. Table of Contents: Introduction / Background on Array Processing / Nonadaptive Direction of Arrival Estimation / Adaptive Direction of Arrival Estimation / Appendix

Customer Reviews

This a great book for direction finding if you already have a good grasp on the underlying theory. It is a recipe book. It goes through each step including matlab examples of multiple techniques. It also gives comparisons of the different techniques. For the price it is a must buy.

From beginning to end - this was a fascinating look at the world of antennas. Jeff's ability to draw the

reader in and hold their attention is masterful. I look forward to the sequel.
