Marc Silber is an award-winning professional video producer, photographer, and photography educator who has been successfully working in the field for decades. Marc combines his passion for the visual art of photography with his love of life. He started out learning darkroom skills and the basics of photography at the legendary Peninsula School in Menlo Park, CA, in the '60s, and moved on to hone his skills to professional standards at the famed San Francisco Art Institute, one of the oldest and most prestigious schools of higher education in art and photography in the United States. Marc has been an educator since then as well; he began his teaching career at the age of 19 at the National Outdoor Leadership School, teaching mountaineering. When teaching a life-or-death subject such as mountaineering, one learns how to make sure the students understand the material; when Marc moved into teaching photography in workshops all over the country, he became renowned as an engaging and helpful speaker and coach, as his greatest joy comes from helping others. More recently, Marc has embraced the digital age with a highly popular YouTube show called 'Advancing Your Photography,' which has won several Telly Awards and other recognition for his work there. This book is a distillation of all the pro tips and wisdom in the YouTube series, in a format you can take with you and refer to constantly when you are out taking your photographs.

An excellent and practical photography book designed to help you take the pictures you like and want to make most. How to look and compose, understand your camera so it becomes second nature and doesn't get in the way. Fine exercises or practice drills also designed to making taking pictures natural and improve skills. I opened this book right to a diagram that showed me something I hadn't understood before. Sweet. Marc Silber's desire is for his handbook to help a photographer advance whether beginner, intermediate or advanced. The color quality of the photos used as

examples are quite good which for some reason I expected less in a smaller format book made to be carried with you on your photo expeditions as modest or grand as you chose them to be. A unique well thought out approach!

This was a very good book and a simple read. Read it through the first time and plan to keep it handy as a reference guide for future use. I suggest reading with a method of marking the most helpful items so you can easily reference when needed. This would be a great beginners guide for someone whose newer to photography. I've been doing it for a while so I knew the basics but still found several areas in the book to flag for later use.

A very fine collection of ideas that will improve any photographer's skills. Marc writes with a passion that inspires. I love his YouTube videos, too.

It's been my great pleasure to have known Marc for many, many years. His talent and skill as a photographer is evident from his fantastic body of work. His skill and talent in communicating his experience, so that we can all be better photographers, is what is immensely impressing me now.

This is an ok book for beginners, I expected something with a more advanced approach.

I didn't find much for advancing my photography. More for a beginning photographer. I have given this book to my 12 year old grandson and I think he will get some good pointers from this book. This book is well written with good illustrations and easy to understand.

A great book for helping one to improve there photography.

Pretty much for beginners. Not as inspiring as the hype would have you believe.
